

E-calculator For Calorie Calculating And Provide Suggestions

in this project we have to introduce the concept Just similar to a human dietitian, this web system will also act like your dietitian. When you go to a doctor of nutrition, then she will ask you your personal details related to body and health such as your age, your height, your weight and how much water do your consume in a day and how much walk do you take regularly and how much work do you do regularly. Just similar to this doctor, this calorie calculator and diet check also generates BMI based on provided details and then the AI (Artificial Intelligence) consultant will also advice you about what should your intake in your diet and what should you ignore in order to keep yourself healthy via your diet.
