

Company employee profile using QR code

Quick Response (QR) codes can tie all this together. QR Code is the trademark name for the two-dimensional barcode system. It's the black-and-white square that's on everything from advertisements to inventory. QR codes hold 100 times more data than one-dimensional barcodes and they can be digitally scanned. To find employee detail, a unique QR code is generated and assigned to each employee. QR codes can be read scanning the code with a smartphone or tablet. And employees can check their personal and professional details.
