

Hour Wise Lecturer Tracking System

On bigger colleges and campuses have a difficult task to locate any lecturer as to where and in which room he/she might be in. Also, if there is any change in the regular classrooms of that particular class, there is no way information is given or updated to the students (both from the current class or other students). And also in case if a lecturer wants to know if there are any empty classrooms available for that particular hour, he/she have to send a student to look out for which in turn results in a waste of time. Rather, we are trying to propose a system through which it would be easy to know the location of a lecturer by other students or faculty and also to find out the availability of empty classrooms. This system also helps the lecturers share hyperlinks of their respective class notes with the students in the form of pdf's or documents.
